

LSR Orientation Training

Outline

- Who is HSE?
- Roles and Responsibilities of LSRs
- Salute Introduction
- Navigating HSE Webpage
- Key Resources

Who are we

- The Health, Safety, and Environment Department is composed of the following sections:
 - Environmental Protection
 - Community Health and Safety
 - Fire & Emergency Services
 - Research Safety

Health, Safety and Environment Department

HSE webpage: <https://hse.kaust.edu.sa>

Who are we

- The Health, Safety, and Environment Department is composed of the following sections:
 - Environmental Protection
 - Community Health and Safety
 - Fire & Emergency Services
 - **Research Safety**
- Research Safety provides programs to help laboratories manage risks and implement the appropriate hazard controls.

Health, Safety and Environment Department

HSE webpage: <https://hse.kaust.edu.sa>

The Research Safety Team

By the numbers

Who we are and what we do

~3000	KAUST Employees Covered
200 / 60,000	Laboratories / m ² lab space
~200	Principal Investigators
4 / 4 / 11	COEs / Platforms / Core Labs (BESE, CEMSE, PSE, Core Labs, RPIC)
~200	Lab Safety Representatives (LSR's)
500 / 300	Risk Consultations / Inspections

18 Expert Staff:

- 1 Head, Research Safety
- 1 Lab Safety & Design Specialist
- 2 Biological Safety Specialists
- 2 Industrial Hygienist
- 1 Chemical Safety Specialist
- 1 Radiation Safety Specialist
- 1 Laser Safety Specialist
- 1 Occupational Health Specialist
- 1 Dive & Boat Safety Manager
- 5 Dive Safety Specialist
- 2 Dive Safety Technicians

**Protecting what matters most through our HSE expertise, partnerships and world-class collaborations.
We work closely with our research partners to build resiliency into our research!**

The Barrier Experts

KAUST's Research Safety Team

Marcos Aguilar

- RST Lead
- Lab Safety & Design
- 12+ years experience at KAUST
- Certified Safety Professional & Safety Management Systems

Hattan Matar

- BS Systems Engineering
- MS Risk Control
- Certified Industrial Hygienist
- Certified Safety Professional
- Extensive oil & gas expertise

Kee Mei Leong

- Head, Research Safety
- MSc Safety, Health and Environmental Technology
- BSc Biochemistry
- High containment & animal facilities

Rodion Gorchakov

- Biological Safety Lead
- PhD Epidemiology
- MS Molecular Bio
- BSL-3 Expertise
- Biological Safety Officer
- Certified Biological Safety Professional

Mohamad Bahmaid

- Radiation Safety Officer
- Certified Rad Safety Officer
- Eng. Degree Nuclear Engineering Sciences
- MS Health & Med. Physics
- BS Nuclear Physics

Gianluca Barco

- Chemical Safety Specialist
- PhD Chemistry
- NEBOSH IGC
- Safety Auditor ISO 45001
- Laboratory Waste Specialist

Sujata Haydu

- Biological Safety Specialist
- MSc Microbiology & Infectious Diseases
- HIV Research background
- Alternate Biological Safety Officer

Moustafa Elsoubki

- Laser Safety Specialist
- PEM Specialist
- BS Physics
- MSc Medical Physics
- Non-Ionizing Radiation Safety Specialist

Wafa Salem

- Occupational Health Specialist
- 25+ years experience Occ. Health
- Well-being, disability management

The Barrier Experts – New Additions

KAUST's Research Safety Team

M. Zahid Iqbal

- Lead Senior Lab Safety Specialist
- Certified Industrial Hygienist
- Canadian Registered Safety Professional

Augusto Montbrun

- Dive & Boat Safety Manager
- 30 years dive ops & marine conservation experience
- 3,000 + dives
- Past life Dive Ops Mgr. Buddy Dive Resort in Bonaire

Muhammad Imran

- Dive Safety Technician
- 20+ years as Navy Clearance Diver Technician.
- Skilled in diving instruction, equipment repair & technical diving

Francis Uy

- KCRI Dive Safety Specialist
- 15 + years as DSO in Middle East, 16 years PADI Course Director
- ADCI Air-Diving Supervisor
- NEBOSH IGC, BS Physical Therapy

Beatrice Rivoira

- Dive Safety Specialist/ Assistant Dive Safety Officer
- MSc in Marine & Oceanographic Biology
- CCR and O/C technical diving instructor
- 20+ in diving industry

Khurram Shahzad

- Dive Safety Technician
- 20 + yrs as Navy Dive Master
- Specializes in complex dive ops and ensuring strict safety protocols
- Certified in dive equipment/safety mgt.

Imogen Danks

- Dive Safety Specialist
- Dive supervising, safety diving, equipment mgt.
- High profile projects like BBC, AppleTV+/BBC
- Joined Apr. 15/24

Krasimir Todorov

- Dive Safety Specialist (Dive Locker)
- Certified Chamber Operator & Cylinder Visual Inspector

Stuart Goring

- Beacon Dive Safety Specialist
- Offshore Commercial Diver
- Fellow of the Royal Geographical Society
- NEBOSH, IRATA, IDEST, IMCA DMT
- HPAC Emergency Medical Technician

Safety Programs

Lab Life Cycle

- Lab design
- Assessments
- Lab safety
- Lab clearance

Biosafety

- BSL-1 and BSL-2
- Biosafety cabinet certification
- Biological registration
- KAUST Committee (IACUC and IBEC)

Chemical Safety

- Acid, base, corrosive, flammable, and oxidizer
- Fume hood testing
- Compressed gas and cryogenics
- Experiment review

Safety Programs

Industrial Hygiene

- Respiratory protection
- Possible exposure
- PPE
- Hearing conservation
- Heat illness prevention
- Mold prevention and remediation
- Office ergonomics

Laser Safety

- Registration of lasers (Class 3B & Class 4)
- Laser lab design
- Hazard assessment

Radiation Safety

- Registration of X-ray equipment
- Registration of radioactive substances
- KAUST Committee IRSC

Classification: Internal

KAUST Committee

[Research Compliance](#) coordinates the University's regulatory framework for research safety and ethics review via four faculty-led committees:

- Institutional Animal Care and Use Committee ([IACUC](#))
- Institutional Biosafety and Bioethics Committee ([IBEC](#))
- Institutional Radiation Safety Committee ([IRSC](#))
- Dive Control Board ([DCB](#)) for scientific diving

Research Compliance also promotes policies and activities pertaining to the responsible conduct of research.

KAUST Committee

Institutional Biosafety and Bioethics Committee (IBEC)

Research that involves the use of:

- Recombinant or synthetic nucleic acids,
- Infectious agents,
- Biological toxins,
- Biohazardous agents (Risk Group 2),
- Research involving human subjects.

Institutional Animal Care and Use Committee (IACUC)

Care and use of live animals in:

- Research
- Teaching
- Testing activities

Institutional Radiation Safety Committee (IRSC)

Research conducted at or sponsored by KAUST that involves the use of:

- Radioactive substances
- Radiation-producing equipment (including SEM, TEM, hand-held x-ray, etc.)

Dive Control Board

- Research conducted at or sponsored by KAUST that involves scientific diving.

KAUST Committee

Institutional Biosafety and Bioethics Committee (IBEC)

Reviews all research conducted at or sponsored by KAUST that involves the use of:

- Recombinant or synthetic nucleic acids,
- Infectious agents,
- Biological toxins,
- Biohazardous agents (Risk Group 2),
- Research involving human subjects.

Institutional Animal Care and Use Committee (IACUC)

Reviews all research conducted at or sponsored by KAUST that involves the care and use of live animals in:

- Research.
- Teaching
- Testing activities.

Dive Control Board

Reviews all research conducted at or sponsored by KAUST that involves scientific diving.

Institutional Radiation Safety Committee (IRSC)

Reviews all research conducted at or sponsored by KAUST that involves the use of:

- Radioactive substances
- Radiation-producing equipment (including SEM, TEM, hand-held x-ray, etc.)

LSR Role & Responsibilities

LSR assists faculty to promote a safe work ethic and safe work environment.

Roles and Responsibilities

Laboratory Safety Representatives (LSR) provide an essential link between the lab and Health, Safety & Environment (HSE).

LSRs are the catalyst for driving a strong safety culture and a safe work environment in the lab with the support of the faculty.

LSRs help to improve lab safety, identify hazards, and provide support to prepare for and deal with emergency situations.

Interventions

Lead by Example

- Discuss your role with your faculty and the need for their support to promote a strong safety culture.
- Outline resources and support needed to be an effective LSR.
- Obtain all the required training related to the hazards present in the areas you represent.
- Be aware of all the relevant programs that apply to research conducted in your lab (<https://hse.kaust.edu.sa/safety/laboratory-safety>).
- Monitor the safe and unsafe behaviors in the lab area and address any safety concerns.
- If you have questions or need assistance, please contact hse@kaust.edu.sa.

LSRs should be driven, proactive, responsible, and result-oriented to improve the safety culture in the lab.

New LSR or Alternate LSR

Once you have been appointed as LSR or alternate LSR by your faculty, you should:

- Notify HSE (HSE@kaust.edu.sa) that you have been appointed LSR so that HSE can include you in the LSR email list and notify you of any update related to lab safety.
- Establish who is the HSE [building point of contact](#).
- Discuss your responsibilities with your faculty and the possibility to nominate an alternate LSR.
- Update the following documents to include your contact details:
 - Lab Safety Plan (LARA)
 - SOPs
 - Lab door sign
 - Organizational flip chart
- Attend the LSR Orientation Training (live session)

Hazard Identification and Risk Control

- **Lab Safety Plan (LSP)** – Prepare/review the Lab Safety Plan (future LARA) to identify all the hazards present in the lab and ensure that safety controls are available and operational to minimize the risks (e.g., fume hood, biosafety cabinets, enclosures, etc.).
 - LSP must be read, understood and signed by everyone working in your lab
 - LSP available to all lab personnel
 - LSP must be reviewed annually
 - A template is available on our webpage
- **Standard Operating Procedures (SOPs)** - Assist lab members to develop written SOPs for hazardous operations, equipment, or specific experiment.
 - Ensure that SOPs are reviewed regularly (or yearly)
 - A template SOP is available on our webpage
 - Have all lab members read and sign the SOPs that apply to their work
 - Ensure lab-specific SOPs are available (either paper copies available in the lab or electronic copies accessible while in the lab)

Hazard Identification and Risk Control

- **Chemical Inventory** - Help maintain the chemical inventory up to date using the online chemical inventory system (Salute). To obtain access to the chemical inventory you must first complete the Chemical Inventory training.
- **Hazardous Waste** - Manage hazardous waste and satellite accumulation areas (SAA)
 - Ensure the hazardous waste bags and containers are segregated appropriately and labeled or tagged as per the hazardous waste guide.

SATELLITE ACCUMULATION AREA
4 - 4830

KAUST chemical hazardous waste must meet the following:

- ALL containers (bottles, bags, boxes) must be labeled with a completed and legible KAUST Hazardous Waste Tag.
- All chemical names must be spelled out legibly in English. Do not use abbreviations, formulas, or structures.
- All containers (bottles, bags and boxes) must be securely closed with a proper fitting lid / cap. Tape boxes shut.
- No visible contamination on the outside of the container.
- Ensure there are no leaking containers and all spills have been cleaned up.
- Bagged waste must be securely closed with no free liquids and no protruding or sharp objects inside.
- Keep incompatible wastes separated from each other.
- Unknown, unlabeled, bulging or suspected unsafe wastes will not be collected.
- "Empty" containers must be rinsed and be emptied of any free liquid. "Empty" containers with free liquid will not be collected.

For questions contact researchsafety@kaust.edu.sa

HAZARDOUS WASTE

Date: _____

Contents:	Amount	Units

If mixture, what is pH: _____

HAZARDS (check all that apply)

☐ Corrosive: Acid	☐ Air Reactive	☐ Flammable/Combustible
☐ Corrosive: Base	☐ Water Reactive	☐ Other/Non-Hazardous
☐ Biohazardous	☐ Toxic/Poisonous	☐ Oxidizer

Hazardous Waste Generator Information

Building & Room Location (FLOC): _____

Full Name: _____

Email: _____

Key Points Hazardous Waste Management

- All chemical containers must be labeled with a completed KAUST Hazardous Waste Label:
 - Must be in English and include all constituents
 - No abbreviations
 - No chemical formulas
 - No chemical structures
- Containers must be securely closed with a properly fitted cap/lid.
- Ensure that there is no contamination on the outside of containers.
- Keep incompatible wastes separated.
- Unknown/unlabeled containers will not be collected.

hse.hazwastepickup@kaust.edu.sa

Personal Protective Equipment and Safety Supplies

- Ensure availability of adequate personal protective equipment (PPE) for each lab member. [PPE standard for KAUST Laboratories](#).
- Encourage/support lab personnel to use and maintain PPE.
- Identify required protective equipment needed (gloves, goggles, respirators, etc.).
- Ensure all [safety supplies](#) (first aid kits, spill kits, etc.) and equipment required for the management of hazardous waste are available.

lassification: Internal

Key Points of Required PPE in the Lab

- Wear minimum PPE when in the lab
 - Eyewear – worn at all times when entering the lab (working or passing through the lab)
 - Lab coat buttoned – worn when working with or around hazards
 - Gloves – worn when working directly with hazards
- Wear additional PPE based on the lab activities
 - Special gloves (cryogenics, hot surfaces, etc.)
 - Face shield (cryogenics, UV, etc.)
 - Special eyewear (UV, lasers, etc.)
 - Respirators – require a risk assessment from IH and enrollment in respiratory protection program (even N95)
- Users must wear PPE correctly when in the lab
- **NO PPE WORN OUTSIDE THE LAB**

How to Dress for the Lab

Personal Protective Equipment and Safety Supplies

- Ensure availability of protective equipment (PPE) for all lab members. [PPE standard for KUST](#)
- Encourage/support lab personnel to maintain PPE.
- Identify required protective equipment (gloves, goggles, respirators, etc.)
- Ensure all [safety supplies](#) (first aid kit, etc.) and equipment management of hazardous materials

Points of Required PPE in the lab

Minimum PPE when in the lab

Safety glasses – worn at all times when entering the lab (working or passing through the lab)

Lab coat buttoned – worn when working with or around hazards

Gloves – worn when working directly with hazards

Additional PPE based on the lab activities

Special gloves (cryogenics, hot surfaces, etc.)

Face shield (cryogenics, UV, etc.)

Special eyewear (UV, lasers, etc.)

Respirators – require a risk assessment from IH and enrollment in respiratory protection program (even N95)

Must wear PPE correctly when in the lab

Do not wear PPE outside the lab

PPE MUST NOT BE WORN OUTSIDE THE LAB

Research PPE & Hazardous Material Transport

- **PPE Stays in the Lab:** Don't wear lab coats, gloves, or goggles outside lab areas.
- **Carry PPE, Don't Wear It:** Fold lab coats inside out or place it in a secure bag when moving between labs.
- **Transport Safely:** Use leak-proof containers, avoid touching shared surfaces.
- **Use Designated Routes:** Level 0 tunnel, service elevators/corridors.
- **Protect Our Community:** Following these safety protocols helps maintain a healthy and secure environment for everyone at KAUST.

Secondary
Containers

COVID-19 Safety
Items

Training

- Ensure everyone who works in the lab is competent to carry out their duties.
 - Lab Orientation Checklist (*recommendation*)
 - Notify HSE if additional safety-related training is needed for the lab group.

Training requirements:

- Lab Safety Training (online or live classes available)
- Hazardous Waste Training
- Emergency and Incident Preparedness Training
- Any additional online training identified in LSP
- LSR Orientation Training (LSR and alternate LSR only)
- [First Aid Training](#) (recommend 2 people)
- [Fire Extinguisher Training](#) (recommend 2 people)

Communication

- Connection between HSE and your lab - point of contact for all health and safety matters arising within your lab.
- Attend the Lab Safety Forum (or send a designated representative if you cannot attend).
- Communicate with all team members relevant outcomes from the Lab Safety Forum and other emails received via the LSR distribution list.
- All presentations for previous forums can be found on the [LSR webpage](#).
- Report any safety hazard observed, near-miss, accident, incident, or occupational disease by creating a new event in Salute. [Click here to raise an event](#).
- Assist in the investigation of all incidents that occurred in your lab.

Safety Assessment Program

Safety Assessment Program adopts a framework which progressively integrates the capability of self-regulation among Laboratory Safety Representatives (LSRs) and independent assessments by Health, Safety and Environment (HSE) Research Safety Team (RST).

The objectives of the Safety Assessment Program are to **improve safety culture** and to **enhance safety best practices** in KAUST research environment in a collaborative manner.

Safety Assessment Program serves as a shared tool in integrating the Plan-Do-Check-Act Cycle of continuous improvement in research safety.

Safety Assessment Program

Laboratory spaces are broadly classified according to the 3 assessment classification criteria below:

- Assessment Coverage – applicable for Tier 1, Tier 2 and Tier 3 assessments.
- Risk Level – Applicable to Tier 2 assessment only.
- Core Safety Program – Applicable to Tier 3 assessments only.

Assessments

- LSR or lab user perform Tier 1 Lab Safety Review at least twice a year .
 - Simple checklist – no finding added.
 - Help the laboratory to validate controls.
- Enables the lab users to conduct safety readiness reviews, prevent safety issues, and keep a record of continuous safety improvements.

<https://hse.kaust.edu.sa/SALUTE/Assessments>

Checklist and Survey

Engineering Controls

Are biosafety cabinets, fume hoods, glove boxes, laminar flow hoods and other safety engineering controls functioning and ready for operation? *

Administrative Controls

SDSs available *

Signage reflects hazards *

Appropriate type of training in place *

Personal Protective Equipment (PPE)

Required PPE is available *

Number of times when PPE is not used effectively *

Storage and Housekeeping

General housekeeping issues in the lab *

Service Corridor Issues *

Excessive storage issues *

Issues with heavy items stored too high *

Issues with tripping or slipping hazards *

General Safety

Issues with materials (bio, chem, rad) are not labelled, stored, and segregated properly *

Issues with bench top samples are not labelled and stored properly *

Issues with gas cylinders are not secured and labeled properly *

Electrical safety issues: (Power strips not elevated from the floor, exposed wiring or damaged electrical cords, overloaded circuitry) *

Hazardous waste issues (Containers are not closed, not labeled and stored correctly) *

Emergency Readiness

Spill kits are available, right type & free of obstructions *

Eye wash stations are checked & free of obstructions *

First Aid kits are available

Sharps and broken glass containers are available

Proper fire extinguisher is available & checked

Laboratory Fire Safety Inspections

The LSR shall conduct a walkthrough Fire Safety Inspection at the Laboratory Facility to ensure it is safe to protect/prevent harm, to people, property, and environment.

Fire Safety Inspection Checklist

1. Are all escape routes, exit doors, fire detection and alarm systems, fire protection systems, equipment, and safety signage unobstructed, clearly visible, and accessible at all times? Also, is fire doors remains in closing condition at all times?
2. Is the fire extinguisher available & checked?
3. Are all flammable, combustible materials, and compressed gas cylinders properly segregated, securely fastened, and clearly labeled with appropriate signage?
4. Are fire hazards controlled by ensuring proper separation of ignition sources from combustibles, safe disposal of flammable waste?
5. Are emergency preparedness measures in place, including a posted evacuation plan?

Lab Member Departure

- ***Student departure:*** Completed by LSR to ensure that the lab space occupied is free from hazards and that chemicals and samples have been disposed of or transferred to another lab member (remember to check the fridge and freezers).
- ***Post-doc, Researcher departure:*** Completed by RST to ensure that the lab space occupied is left hazard free and that all chemicals/samples have been disposed of or transferred. You are required to attend the visit or nominate a delegate.

Emergency Preparedness

- The LSR assists the faculty and ensures emergency preparedness measures are in place:
 - Two persons trained for first aid and fire extinguisher
 - Identify risks in your area (Lab Safety Plan and SOPs)
 - Establish emergency procedures specific to your lab (can be added to the Lab Safety Plan) include:
 - Safe shutdown of experiments and equipment
 - Safe handling of hazardous spills
 - Triggering of alarm systems
 - When and how to escalate an incident
 - Organize and execute regularly small emergency drills (e.g., simulate a small spill, walkthrough the evacuation procedure with your team, etc.)

Emergency Situations & Lessons Learned

- Lesson Learned following a near-miss or incident should always be shared
 - Not always the result of human mistakes, can be the failure of an instrument or facility
 - Use it as a learning tool
 - Don't use the names of people involved
 - Don't try to embarrass or blame.
- Listen to safety concerns or complains
 - Listen and take it seriously
 - Thank them!
 - Respond quickly
 - Involve employees
 - Follow-up and contact HSE if necessary

An emergency is any situation that requires IMMEDIATE attention such as fire, or medical response to preserve life or property

- Call 911 from a Campus phone
- Call **012 808 0911** from a cell phone
- Be part of assistance during emergency and met with the first responder if necessary
- Later raise a Report/Event in Salute
- Work with HSE on investigation and corrections

Summary

Hazard Identification & Risk Control

Lab Safety Plan & SOP
Lab door sign, PPE and Safety Supplies List
Chemical inventory
Hazardous Waste Management

Training

3 required training as well as lab specific training
On-job trainings and need for retraining
Coordinate on-demand trainings

Assessment

Conduct Tier 1 Lab Safety Review
Assist with Tier 2 and Tier 3 assessments
Departure clearance

Communication

Attend Lab Safety Forum
Forward applicable safety information sent by RST to lab users
Promote safety culture in the lab

Emergency Preparedness

Establish location of the assembly point, fire extinguishers, and fire pull station
Create emergency checklist
Organize drills to ensure lab members are prepared

Research Safety & LSR Service Certificates

Research Safety Certificate

Available to all lab members.

Recognize the efforts and reward their commitment to safety.

How to obtain it:

Take 5 required courses
Take 9 additional courses offered by HSE

LSR Service Certificate

Awarded to LSRs for their support and collaboration with HSE.

Certificate.

How to obtain it:

Complete at least two years of service as an LSR
Obtain the Research Safety Certificate
Attend 75% of Lab Safety Forum during service

Assessments

Use [LabMapper](#) to find the correct space to enter in the Tier 1 Lab Review Assessment

LabMapper

LabMapper provides the floor map information to assist with defining borders of designated laboratory spaces for each lab in KAUST as related to the laboratory safety assessments. The indicated FLOC numbers are used in the Tier 1, Tier 2 and Tier 3 assessments and correspond to the areas defined in LabMapper.

Note. Service corridor areas are not covered in LabMapper, but are included in the tiered assessments.

Inventory Status

Status	Approval Date	Inventory Comments
Requires Update	N/A	N/A

Inventory Items

Move Print Label Export + New Chemical

Search here...

☐	ID	Chemical Name	Quantity	CAS No.	Storage Code	Manufacturer	Manufacturer ID	Expiration Date
☐	1150174599	NP-40 Surfact-Amps detergent	0.05 Milliliters	N/A	N/A	Thermo Scientific	N/A	N/A
☐	1150173109	FORMAMIDE, FOR MOLECULAR	0.5 Milliliters	75-12-7	N/A	FISHER SCIENTIFIC-UK	N/A	N/A

On each individual inventory, you are the owner of you can access the following information:

- Salute ID for this inventory
- Last time it was updated
- Building / Floor / Space
- Inventory status (Pending EHS Review, Incomplete, Complete, Closed, Require Update)
- Possibility to export the inventory on an excel spreadsheet
- View all the chemicals included in this inventory

Chemical Inventory

The screenshot displays the 'FORMAMIDE (1150173107)' entry in the Chemical Inventory system. The interface includes a sidebar with navigation options: Dashboard, Findings, Violation Findings, Assessments, Safety Trainings, Employee Roster, Chemical Safety (highlighted), Drills, Request/Report, and Documents. The main content area shows the 'Overview' tab for the chemical. At the top, there are buttons for 'Print Label', 'Move', 'Create Similar', 'Get SDS on Email', and a 'Save' button. The 'Overview' section contains the following fields: 'Chemical*' (FORMAMIDE), 'Quantity*' (0.1) and 'Unit*' (Milliliters), 'Container Count*' (1), 'Building' (IBN Al Haytha...), 'Floor' (3 (B2)), 'Space / Room' (N/A), 'Location Comment' (2-3630/LFO-71 (LFO70) Barcode(1194372)), 'Manufacturer' (SIGMA ALDRICH), 'Manufacturer ID' (empty), 'Expiration Date' (Select Date), 'Last Printed Label Date', and 'Last Printed Label Time'.

Click on one of the chemicals and you can access the following information:

- Print a label
 - Move to a different chemical inventory
 - Obtain the SDS for that chemical
 - See the quantity and the location
 - At the bottom, you can remove that chemical from the inventory
- The LSR decides who can be an owner of the chemical inventory for the lab (the owner can view and change the inventory)
 - The LSR must take the chemical inventory training before being granted access
 - Check the naming convention for the chemical inventory on our webpage
